01

197% YoY Revenue Growth

Analyzed $1.27M in sales data across 830 orders using SQL window functions; identified that annual revenue grew from $208K (1996) to $617K (1997), enabling targeted recommendations for replicating high-growth quarters.

02

30.6% Revenue Concentration Risk Identified

Queried multi-table Target database to surface that top 5 SKUs drove 30.6% of total revenue ($387K); built product-performance dashboards to support inventory prioritization decisions.

03

Employee Performance Benchmarking Across 9 Reps

Designed SQL ranking queries (RANK, LAG, window aggregations) revealing an 18.4% revenue share gap between top and bottom performers; output directly supported sales coaching and territory reallocation.
